induced acoustic noise and vibration coming from electrical actuators, alternator or traction motor in electrical cars). Many problems are generated as either vibration or noise, transmitted via a variety of paths, and then radiated acoustically into the cabin. These are classified as "structure-borne" noise.

the most frequently reported job-related illnesses in the United States. As more than 2.9 million construction workers are exposed to harmful levels of noise 1, hand held power tools that emit high intensity operating noises are one of the major contributors to occupational NIHL. While various noise guidelines define the exposure limit ...
