Studying huge amounts of data can be very challenging. The best way to examine this data and look for relationships is by creating a graph. Graph are simply visual representations of data. In Earth Science, we generally visualize data using line graphs. In this activity, you will be exploring four data sets pertaining to our study of astronomy.

The most common graphs are the bar graph, line graph, and pie chart. Line graph - shows change over time. Bar graph - compares multiple groups of information. Pie chart - shows percentages. Graphs are typically drawn as the DV versus the IV. IV is usually on the x-axis and DV is on the y-axis (but not always).

Heat maps are mostly used to plot large and complex data such as Earth science measurements so they can be viewed as a whole data set at once. Heat maps can take the form of a rectangular chart, the cells of which contain numerical data. Or, more commonly in Earth science applications, heat maps are colors overlaid on a map of Earth.
