This is because when there is an electrical problem occurring in one part of a building, the wires to that building can easily be located in the junction box. If your junction box is not covered, it will become harder to locate which set of wires have problems. Moreover, a junction box can prevent chances of electrocution. Solution

To fix the problem, first, turn off the power to the circuit. Then, remove the electrical tape from the wires and clean them. Make sure there is the proper amount of exposed wire showing (for most connectors, this means about 3/4 inch), then join the wires together with a wire nut or other approved connector (there are now push-in connectors that some pros like to use).
