Let x be a real number. If $0 < x < \epsilon$ is true for all real numbers $\epsilon > 0$, then $x = 0$. This statement is the general idea of what we do in analysis. If we wish to show that $x = 0$, we show that $0 < x < \epsilon$ for all positive ϵ . The term real analysis is a little bit of a misnomer. I prefer to use simply analysis. The other

Basic Analysis: Introduction to Real Analysis

In analysis, we usually prove inequalities, and we prove those inequalities by estimating. To illustrate the point, consider the following statement. Let x be a real number. If $x < \epsilon$ is true for all real numbers $\epsilon > 0$, then $x = 0$. This statement is the general idea of what we do in analysis. Suppose next we really wish to prove the equality $x = 0$.

Basic Analysis I

Introduction This course provides an introduction to real analysis. The principles behind the real number system will be introduced. Sequences and series of numbers will then be discussed, and theorems presented to analyze their convergence properties.
