When the Voyager 1 probe was 3.7 billion miles from Earth, Carl Sagan made a request.. He asked NASA to turn it around to snap a quick photograph. The result was a faint image of Earth surrounded ...

Pale Blue Dot: What's the Point of It All? | by Zat Rana ...

One of the most fundamental requirements for a planet to sustain life is to orbit in the "habitable zone" of a star — the "Goldilocks" region where the temperature is just right and liquid water can exist. Astronomers have, to this point, discovered around 30 exoplanets in the habitable zones of stars.

Earth May Be a 1-in-700-Quintillion Kind of Place ...

The fossil record tells us that life on Earth has lasted at least 3.5 billion years (the Earth is about 4.54 billion years old), with the oldest physical traces of life dating back 3.7 billion years. And, if some kind of disaster doesn't intervene, our planet should continue to host life for at least another 1.75 billion years.

8 Things that make Life on Earth Possible - Our Planet

The Earth itself is not much older, having formed 4.5 billion years ago. If we assume that life formed on Earth - which seems reasonable, given that we have not yet found it anywhere else ...

BBC - Earth - The secret of how life on Earth began

By the way, Earth is not the only inhabited planet. The universe (source consciousness) created many worlds to play the GAME OF LIFE on. Apparently, it's experimenting with a great diversity of environments and life forms to see what it can learn about existence and itself. The EARTH GAME is said to be one of the most challenging in all the ...

What's the Point of Life? Why are we here? | Divine Cosmos

Stare at the dot for any length of time and then try to convince yourself that God created the whole Universe for one of the 10 million or so species of life that inhabit that speck of dust. Now take it a step further: Imagine that everything was made just for a single shade of that species, or gender, or ethnic or religious subdivision.

Pale Blue Dot Quotes by Carl Sagan - Goodreads

The evolutionary history of life on Earth traces the processes by which living and fossil organisms evolved, from the earliest emergence of life to the present. Earth formed about 4.5 billion years ago and evidence suggests life emerged prior to 3.7 Ga. (Although there is some evidence of life as early as 4.1 to 4.28 Ga, it remains controversial due to the possible non-biological formation of ...

Evolutionary history of life - Wikipedia

Earth melts, magma ocean. 4.2 BYA, Earth was completely differentiated. 4 BYA, earliest oceans formed, thick atmosphere exists 3.8 BYA, life develops 2.5-3 BYA, photosynthesis leads to O2 in ocean 2 BYA, O2 hits atmosphere Early Earth Timeline Giant Impact Formation of Earth-Moon System SHOW MOVIES!

PowerPoint Presentation

Date Event 4600 Ma The planet Earth forms from the accretion disc revolving around the young Sun, with organic compounds (complex organic molecules) necessary for life having perhaps formed in the protoplanetary disk of cosmic dust grains surrounding it before the formation of the Earth itself.: 4500 Ma According to the giant impact hypothesis, the Moon originated when the planet Earth and the ...

Timeline of the evolutionary history of life - Wikipedia

The Earth is warming and changing faster than many climate scientists had predicted, and at times the future looks impossibly grim. Yet practical and accessible solutions to climate change are already at hand. The HBO documentary "Ice on Fire", produced and narrated by Leonardo DiCaprio, focuses on these solutions and on the scientists who ...
