Windows Server 2016 - Wikipedia

In the local administrators group I have domain admins. My account is a domain admin. Each drive has full control permissions granted to the local administrators group. I've had this setup for years across older versions of Windows server. My only 2 2016 VM's though both have this behavior where i can't save files into any of the drives.

Administrators cant save files Windows server 2016

Cluster Operating System Rolling Upgrade enables an administrator to upgrade the operating system of the cluster nodes from Windows Server 2012 R2 to Windows Server 2016 without stopping the Hyper-V or the Scale-Out File Server workloads. Using this feature, the downtime penalties against Service Level Agreements (SLA) can be avoided.

What's New in Windows Server 2016 | Microsoft Docs

When you install Windows Server 2016, the administrator account gets created by default, and it's the account that is supposed to have the highest privilege on the server, but on Windows server 2016 you cannot even open the calculator with the administrator account (I assume it is for security reasons, calculators are too dangerous you know) so you need to create a new local account in order to open all the applications.

Create a new local user account in Windows Server 2016
